

VIVEK KUSHWAH

Indore, MP, India · +91-8989879834 · wiwek13@gmail.com · [linkedin.com/in/wiwek13](https://www.linkedin.com/in/wiwek13) · github.com/wiwek13
SUMMARY

Senior DevOps / Observability Engineer with 5 years of experience in autonomous infra and high-scale Kubernetes ecosystems. Expert in architecting **Observability as Code** (Grafana, Prometheus) and **Agentic AI infrastructure**. Specialized in multi-cloud reliability (AWS, OCI, Azure) for fintech platforms, achieving 40% FinOps savings. **Two-time recipient of the Power Performer (Zebpay) and Star Spot (Vivvix) awards.**

EXPERIENCE

Nymcard | *DevOps Engineer*

Abu Dhabi, UAE (Remote) | Feb 2026 - Present

- Automated operator-based lifecycle management for stateful services (Kafka, PostgreSQL, RabbitMQ) for 99.99% uptime, routing SLO alerts to Grafana.
- Built GitHub Actions CI/CD and managed GitOps (Flux/Argo CD) across 8+ Kubernetes clusters, reducing deployment toil for 50+ engineers.
- Architected an Agentic AI Observability Assistant using LLMs to correlate signals, cutting production incident resolution time (RCA) by 40%.

Zebpay | *DevOps Engineer*

New Delhi, India | May 2024 - Dec 2025

- Deployed centralized observability (Prometheus, Grafana, Thanos, Loki, OTel) across AWS accounts, establishing SLOs and VM monitoring.
- Modularized GitHub Actions CI/CD with integrated SAST (Trivy, Semgrep), reducing build times by 35% and automating image hardening.
- Slashed cloud spend by 40% via a FinOps initiative (Opencost) focusing on intelligent scaling, capacity reservations, and consolidation.
- Orchestrated zero-downtime migration from Azure APIM to AWS API Gateway for 2T requests/month, optimizing API latency and backend integration.
- Upgraded AWS EKS clusters with Karpenter (autoscaling), Cilium, and OPA (compliance) using custom Terraform modules and Helm charts.

Rizzle | *DevOps Engineer*

Hyderabad, India | Sep 2023 - Apr 2024

- Provisioned AWS infrastructure via Terraform and CloudFormation, integrating CloudWatch metrics into Managed Grafana to reduce MTTR by 25%.
- Optimized Kubernetes manifests and HPA scaling for media workloads, improving resource utilization by 20% and eliminating OOM pod evictions.
- Automated delivery via Argo CD/Jenkins and built Node.js Slack integration tools, shortening deployment cycles for internal teams.

Vivvix (Numerator + Kantar / Now MediaRadar) | *DevOps Engineer*

Pune, India | Mar 2021 - Aug 2023

- Led migration of ETL pipelines from Airflow 1.10 to 2.x with hardened CI/CD flows and Grafana dashboards.
- Standardized application logging/tracing for AWS Lambda using CloudWatch, X-Ray, and Grafana.
- Bootstrapped Azure AKS clusters and provisioned multi-cloud infrastructure using Terraform and Atlantis.
- Cut deployment times by 50% via re-architecting parallel execution and caching in Azure Pipelines.
- Optimized Snowflake/Databricks FinOps and deployed AWS DMS autoscaling to reduce data costs by 40%.

PROJECTS

Autonomous RCA Agent: Developed an LLM agent correlating Prometheus metrics with deployment logs to accelerate incident root cause analysis.

Multi-Cluster Observability Platform: Unified AWS/Azure monitoring plane using Thanos and OpenTelemetry for long-term metrics and tracing.

EDUCATION

Bachelor of Technology, Computer Science, MANIT Bhopal

2016 – 2020

TECHNICAL SKILLS

- Platform & IaC:** Terraform, Kubernetes (EKS, AKS, Rancher), Helm, Docker
- SRE & Observability:** Prometheus, Grafana, Thanos, Loki, Tempo, OpenTelemetry, CloudWatch, Opsgenie, SLO/SLI
- CI/CD & DevSecOps:** GitHub Actions, Azure Pipelines, Argo CD, Jenkins, CircleCI, Trivy, Semgrep
- Cloud Ecosystem:** AWS (Lambda, EKS, ECS, RDS, MSK, DMS), Azure (ADF, Databricks, AKS, APIM), OCI, GCP
- AI & Automation:** LLM Agentic Workflows, AI Observability, Python, Go, Bash, Node.js
